***infoUSA* Announces Partnership with TCS to License Over 14 Million Business
Records for Real-Time Points of Interest**

***TCS to Integrate infoUSA Business Records into Next-Generation Personal Navigation Applications
for Wireless Handsets***

OMAHA, NE – *infoGROUP* (NASDAQ: IUSA), the leading provider of proprietary business and consumer databases, local business listings for directories, Points of Interest (POI) for navigation systems, sales leads, direct marketing, email marketing and global information, today announced TeleCommunication Systems, Inc. (TCS) (NasdaqGM: TSYS), a leading provider of mission-critical wireless communications, has entered into an agreement with *infoUSA*'s license division to obtain 14 million U.S. and 129,000 Puerto Rico business records. TCS will integrate *infoUSA*'s records into its personal navigation solutions TCS Navigator and TCS StreetFinder.

infoUSA's categories are the most comprehensive consumer facing options available, boasting over 19,000 unique yellow page headings and 10,500 proprietary categories. With these records, TCS customers have the ability to locate a variety of destinations including restaurants, hotels, shopping and gas stations in real-time, allowing for the most current data to be retrieved.

“We are excited to be partnering with TCS as their innovation in the wireless data and location-based services environment is leading edge,” stated Jim DeRouchey, President, *infoUSA* License Division. “With *infoUSA*'s databases integrated into their solution, TCS customers are routed to the correct location every time.”

TCS Navigator features intuitive speech recognition for fast address entry, real time/traffic-based routing, best-in-class POI maps, custom content and branding, as well as a comprehensive set of core navigation capabilities. TCS Navigator also serves as the first navigation application available that provides both voice output for directions, in-application speech recognition for address entry and an innovative white label solution for operators to differentiate their location service offerings.

TCS StreetFinder is another mobile application that guides users to their destinations. Subscribers can look up a location by category or business name, and download maps, driving directions and contact information. In addition, subscribers whose wireless phones include global positioning system (GPS) capabilities can use StreetFinder to find their exact location in real time. Operators can deploy their own branded versions of TCS Navigator and TCS StreetFinder to leverage their brand equities and build customer loyalty around personalized navigation.

“Consumers are turning to personal navigation today more than ever before,” said Drew Morin, senior vice president and chief technology officer for TCS. “TCS is committed to providing the best applications for wireless handsets, especially when it comes to location technologies. By implementing *infoUSA*’s extensive database of U.S. businesses, TCS customers can now choose from the largest, most complete database of hotels, restaurants, shopping, entertainment and much, much more.”

infoUSA remains a leading provider of proprietary business databases to the local search and navigation industries. For more information, please contact Jim DeRouchey, President, *infoUSA* License Division, at 402-537-7915 or jim.derouchey@infousa.com.

About TeleCommunication Systems, Inc.

TeleCommunication Systems, Inc. (TCS) (NasdaqGM: TSYS) produces wireless data communications technology solutions that require proven high levels of reliability. TCS provides wireless and VoIP E9-1-1 network-based services, secure deployable communication systems, engineered satellite-based services, and commercial location applications, like traffic and navigation, using the precise location of a wireless device. Customers include leading wireless, cable MSOs, and VoIP carriers around the world, and agencies of the U.S. Departments of Defense, State, and Homeland Security.
